

CONCEPT MAP

CHEMICAL BONDING

a force that acts between two or more atoms to hold them together and makes them function as a unit

Class XI

CONCEPT MAP

MOLECULAR ORBITAL THEORY (MOT)

MO Theory was originally called Hund-Mulliken theory. The molecular orbital theory was first published in 1929 paper of Leonard Jones. This paper notably predicted a triplet ground state for dioxygen molecule. The orbital was introduced by Mulliken in 1932. By 1933, the molecular orbital theory has been accepted as a valid and useful theory.
